SUMMARY

Databricks Certified Data Engineer with 3 years of hands-on experience in Azure Databricks, PySpark, and Delta Lake — owning pipelines end-to-end from design to production debugging.

WORK EXPERIENCE

Tata Consultancy Services Limited (TCS)
Data Engineer

Noida, Uttar Pradesh
November 2023 — Present

Framework & Pipeline Engineering

- Built a metadata-driven, modular ETL framework in Azure Databricks standardizing data movement across 20+ pipelines — eliminated redundant logic and enabled feature teams to focus entirely on business transformations.
- Migrated polling-based file-watcher workflows to event-driven triggers using Prefect automations, eliminating dedicated polling jobs and reducing file arrival detection latency.
- Migrated 30+ legacy on-premise SQL jobs and Control-M workflows to Databricks SQL, rewriting queries for distributed processing with full functional parity.

Data Modeling & Integration

- Implemented SCD Type-2 incremental load in PySpark to sync 30+ Databricks Delta tables into Snowflake and Oracle, processing 100+ GB of healthcare data with full auditability.
- Developed a multi-target sync pipeline loading processed data into Snowflake for end-users and back into Oracle for dual-run data quality validation during the EDW migration period.

Disaster Recovery & Environment Management

- Deployed Databricks repositories, workflows, and schema-only Delta structures across 10 workspaces spanning 2 regions (Prod/NPE), configuring metadata-driven ADLS Gen2 sync paths for failover readiness.
- Resolved a critical DR state-tracking flaw where version-based control log entries broke incremental loads on the secondary region post-sync; migrated logic to timestamp-based tracking, preserving active primary operations without disruption.

Production Reliability & Incident Resolution

- Diagnosed and fixed a critical production issue where Oracle treated empty strings and NULL values identically — identified root cause of broken joins between Databricks and Oracle and deployed a fix with zero data loss.
- Resolved a Spark StackOverflowException on a 500+ column table by introducing a Delta checkpoint between transformation and type-casting steps, breaking the driver-side lineage without any schema changes.

SKILLS

Languages:	Python, SQL	Core Skills:	Problem Solving, DSA, Data Modeling
Data Tools:	Databricks, Snowflake, Prefect	Cloud & DevOps:	ADLS Gen2, Azure, Git, GitHub

CERTIFICATIONS

Databricks Certified: Data Engineer Associate | *Issued: October 2025*

Databricks Certified: Data Engineer Professional | *Issued: January 2026*

EDUCATION

Bachelor of Technology (B.Tech), Computer Science and Engineering
Bundelkhand Institute of Engineering & Technology, Jhansi
7.61 YGPA

07/2019 — 05/2023
